

SALES DASHBOARD 2026

Project Documentation & Analysis Report

Prepared by: Sahana Rajaram | Date: June 2026

1. Project Overview

This document explains the Sales Dashboard 2026 project — a data analysis and visualisation tool built in Microsoft Excel. It is designed for anyone in the organisation to understand sales performance, identify top products and regions, and make quick, data-driven decisions.

The workbook has three sheets:

- SalesData – the raw transaction records (source of truth).
- Pivot Tables – summarised data tables and charts.
- Dashboard – a one-page visual summary with interactive slicers.

2. Data Source — SalesData Sheet

Every sale made by the team is recorded here as one row. The columns capture all the details needed for analysis.

Column	What it means
Date	The date the sale was made.
Sales Person	Name of the employee who made the sale.
Region	Geography: East, West, North, or South.
Product	Item sold (e.g. Tent, Sneakers, Smartphone).
Units Sold	Quantity of the product sold in that transaction.
Unit Price	Price charged per unit (in Rs.).
Cost of Goods	What the company paid to produce/buy one unit.
Total Sales	= Units Sold x Unit Price. Revenue earned.
Profit	= Total Sales minus Cost of Goods. Actual earnings.

3. Key Performance Indicators (KPIs)

KPIs are the headline numbers that tell us at a glance whether the business is on track. The Dashboard highlights four KPIs for the full dataset:

KPI Metric	Value
Total Sales	Rs. 1,29,44,500
Total Profit	Rs. 38,34,400
Units Sold	4,705
Average Sales	Rs. 2,58,890

What these numbers tell us:

- **Total Sales:** Total Sales of Rs. 1.29 Cr shows strong revenue generation across all regions and products.
- **Profit:** Profit of Rs. 38.34 L represents a healthy margin — roughly 30% of total revenue.
- **Units Sold:** 4,705 Units Sold across 7 product categories reflects diverse demand.
- **Avg. Sales:** Average Sales of Rs. 2.59 L per transaction indicates high-value deals.

4. Pivot Tables — How the Data is Analysed

A Pivot Table automatically groups and totals data without manual calculation. Four pivot tables were created:

4.1 Sales by Region

Groups total sales by East, West, North, and South. Helps leadership see which territory performs best.

Region	Total Sales
West	Rs. 38,78,100
East	Rs. 35,34,400
South	Rs. 28,70,600
North	Rs. 26,61,400

Insight: West leads with Rs. 38.78 L, closely followed by East. North is the lowest-performing region and may need targeted sales support.

4.2 Sales by Product

Shows which products generate the most revenue and sell the most units.

Product	Total Sales	Units Sold
Tent	Rs. 30,24,000	504
Sneakers	Rs. 31,96,000	799
Smartphone	Rs. 23,50,000	235
Novel	Rs. 8,98,000	898
Moisturizer	Rs. 7,06,800	1,178
Blender	Rs. 22,22,500	635
Action Figure	Rs. 5,47,200	456

Insight: Sneakers and Tent are the top revenue earners. Moisturizer leads in units sold (1,178) but has the lowest revenue per unit — a high-volume, low-margin product. Action Figure is both the lowest revenue and lowest unit-count product.

4.3 Sales by Sales Person

Ranks all 10 sales representatives by total revenue — a key input for performance reviews and commission calculations.

Sales Person	Total Sales
Grace	Rs. 19,57,000
Cameron	Rs. 19,57,000
Carolyn	Rs. 17,41,200
Connor	Rs. 17,41,200
Andrew	Rs. 15,91,600

Insight: Grace and Cameron are the highest earners. Virginia is at the bottom with Rs. 5.78 L — an opportunity for coaching or territory reassignment.

5. Dashboard — Visual Summary

The Dashboard sheet converts all pivot data into visual charts, displayed on a single page so any user can understand performance at a glance. No Excel knowledge is needed to read it.

Chart	Type	What it shows
Units Sold by Product	Line chart	Volume trends across all 7 products.
Total Sales by Product	Bar chart	Revenue comparison per product.
Total Sales by Region	Donut chart	Each region's share of overall revenue.
Total Sales by Sales Person	Bar chart	Individual salesperson performance.

5.1 Interactive Slicers

Slicers are filter buttons visible on the Dashboard. Click any button to instantly filter all charts to that selection:

- **Product Slicer:** Product Slicer — filter to one or more products (e.g. only Sneakers + Tent).
- **Sales Person Slicer:** Sales Person Slicer — filter to one or more team members.
- **Region Slicer:** Region Buttons (East / West / North / South) — available on the Pivot Tables sheet.

To clear a filter: click the funnel icon (top-right of the slicer) or press Alt + C on the slicer.

6. How to Use This Workbook

Follow these steps to get insights quickly:

- Open the file in Microsoft Excel (2016 or later).
- Go to the Dashboard tab for an instant visual overview.
- Use the Product or Sales Person slicers to narrow the view.
- Visit Pivot Tables for detailed breakdowns by region, product, or person.
- Add new rows in SalesData to update everything automatically — the pivot tables and charts will refresh when you right-click any pivot and choose Refresh All.

7. Key Business Insights

- **Top Region:** West Region is the star performer — allocate more resources and maintain momentum.
- **Best Products:** Sneakers and Tent are the revenue engines — ensure adequate stock and sales focus.
- **Volume vs. Value:** Moisturizer has high volume but low revenue — consider a price review or bundle strategy.

- **Weak Product:** Action Figures underperform on both volume and revenue — evaluate continuation or promotions.
- **Low Region:** North Region has the lowest sales — investigate competitive landscape or assign stronger reps.
- **Sales Rep Gap:** Virginia needs support — coaching, mentoring, or territory change could improve results.

8. Glossary of Key Terms

These terms appear throughout the workbook and this document:

Term	Meaning
KPI	Key Performance Indicator — a measurable value showing how well objectives are met.
Pivot Table	An Excel tool that summarises and analyses large data sets interactively.
Dashboard	A single-page visual display of the most important business metrics.
Total Sales	Sum of all revenue generated (Units Sold x Unit Price).
Profit	Total Sales minus Cost of Goods — the actual earnings.
Slicer	An interactive filter button in Excel used to drill into specific data segments.
Bar / Line Chart	Visual charts used to compare values across categories or time.
Donut Chart	A ring-shaped chart showing each segment's share of the whole.
